Output

 Action Output

2. Department wise employee count

```
SELECT department, COUNT(department) AS total_employee  
FROM sagar.employee  
GROUP BY department ;
```

The screenshot shows a SQL IDE interface with a query editor and a result grid. The query editor contains four SQL statements, with the last one selected and highlighted in blue. The result grid displays the output of the selected query, showing a table with two columns: 'department' and 'total_employee'. The data is as follows:

department	total_employee
IT	3
sales	2
HR	1

3. Find Second highest salary

```
select name,salary from sagar.employee salary order by desc limit 5 offset 1;
```

The screenshot shows a SQL IDE interface with a query editor and a result grid. The query editor contains two SQL statements, with the second one selected and highlighted in blue. The result grid displays the output of the selected query, showing a table with two columns: 'name' and 'salary'. The data is as follows:

name	salary
Raghav wag	67000
Ram bhosle	50000
kartik Aryan	40000
Raj mene	35000
Sham sawant	10000

4. Employees whose salary > department average salary

SELECT name, salary, department

FROM sagar.employee AS e1

WHERE salary > (

SELECT AVG(salary)

FROM sagar.employee AS e2

WHERE e1.department = e2.department

);

The screenshot shows a SQL IDE with a query editor and a result grid. The query is as follows:

```
54 WHERE e.salary > d.avg_salary;|
55 • SELECT name, salary, department
56 FROM sagar.employee AS e1
57 WHERE salary > (
58     SELECT AVG(salary)
59     FROM sagar.employee AS e2
60     WHERE e1.department = e2.department
61 );
```

The result grid shows the following data:

name	salary	department
sagar dixit	100000	IT
Raghav wag	67000	sales

5. Inner Join

select e.name,e.salary,d.department_name from sagar.employee as e inner join sagar.department as d on e.department=d.department_name;

The screenshot shows a SQL IDE with a query editor and a result grid. The query is as follows:

```
2 • into sagar.department(department_id,department_name) values(6,'marketing'),(7,'clening staff');
3 • e.emp_id,e.name,e.salary ,d.department_name from sagar.employee as e inner join sagar.department as d on e.department=d.department_name;
```

The result grid shows the following data:

emp_id	name	salary	department_name
5	Raghav wag	67000	sales
2	Sham sawant	10000	sales
6	Raj mene	35000	IT
4	kartik Aryan	40000	IT
1	sagar dixit	100000	IT

6. Left Join

select e.name,e.salary,d.department_name from sagar.employee as e left join sagar.department as d
on e.department=d.department_name;

The screenshot shows a SQL IDE with a query editor and a results grid. The query is a left join between the 'sagar.employee' and 'sagar.department' tables. The results grid displays the following data:

name	salary	department_name
sagar dixit	100000	IT
Sham sawant	10000	sales
Ram bhosle	50000	HR
kartik Aryan	40000	IT
Raghav wag	67000	sales

7. Group By with Having

SELECT department, COUNT(department) AS total_count
FROM sagar.employee
GROUP BY department
HAVING COUNT(department) > 1;

The screenshot shows a SQL IDE with a query editor and a results grid. The query is a group by statement with a having clause. The results grid displays the following data:

department	total_count
IT	3
sales	2

8. Employees hired in last 6 months

```
select name ,department ,hire_date from sagar.employee WHERE hire_date >=
DATE_SUB(CURDATE(), INTERVAL 6 MONTH);
```

The screenshot shows a SQL IDE interface. At the top, a query is entered: `select name ,department ,hire_date from sagar.employee WHERE hire_date >= DATE_SUB(CURDATE(), INTERVAL 6 MONTH);`. Below the query, a comment in Hindi says: `-- Kartik ki date update karke Feb 2026 kar rahe hain`. The 'Result Grid' is displayed below the query, showing a single row of data.

name	department	hire_date
smith	marketing	2026-01-20

9. Find the Duplicates records

```
SELECT department, COUNT(department) AS exact_copies department
FROM sagar.employee
GROUP BY department
HAVING COUNT(department) > 1;
```

The screenshot shows a SQL IDE interface. At the top, a query is entered: `WHERE emp_id = 8;` followed by `SELECT department, COUNT(department) AS exact_copies`, `FROM sagar.employee`, `GROUP BY department`, and `HAVING COUNT(department) > 1;`. The 'Result Grid' is displayed below the query, showing two rows of data.

department	exact_copies
IT	3
sales	2

10. How to remove the duplicates record

```
USE sagar; -- Yeh line MySQL ko batayegi ki 'sagar' database ko active karo  
SET SQL_SAFE_UPDATES = 0;
```

```
DELETE e1
```

```
FROM employee AS e1
```

```
INNER JOIN employee AS e2
```

```
WHERE e1.emp_id > e2.emp_id
```

```
AND e1.name = e2.name;
```

```
select * from employee;
```
